Create "fake" datatable

Taryn made a practice table withdata similar to what we might obtain from running Luminex.

```
#Create "fake" datatable
library(knitr)
library(data.table)
donor<-c(rep("A", 6), rep("B",6), rep("C",6))
stim<-rep(c("un","w","p","s","sw","sb"),3)
ifng<-rnorm(18, 2)
tnfa<-rnorm(18,10)
fake<-as.data.table(cbind(donor,stim,ifng,tnfa))
fake$ifng=as.numeric(as.character(fake$ifng))
fake$tnfa=as.numeric(as.character(fake$tnfa))
#Print "fake" datatable
library(knitr)
kable(fake)</pre>
```

| donor | stim | ifng | tnfa |
|--------------|-----------------------|-----------|-----------|
| A | un | 2.7072616 | 10.096821 |
| A | W | 1.5414188 | 9.316720 |
| A | p | 2.2535578 | 8.686155 |
| A | \mathbf{s} | 1.9146406 | 10.489663 |
| A | sw | 3.3081768 | 12.578254 |
| A | $_{ m sb}$ | 0.8981832 | 9.800296 |
| В | un | 0.6948252 | 10.909559 |
| В | W | 1.8245796 | 10.572008 |
| В | p | 3.4785230 | 11.193426 |
| В | \mathbf{s} | 1.4598965 | 9.614351 |
| В | sw | 1.9612774 | 11.115624 |
| В | sb | 1.7067704 | 7.940108 |
| \mathbf{C} | un | 2.9659728 | 10.179783 |
| \mathbf{C} | W | 0.9600547 | 8.048794 |
| \mathbf{C} | p | 1.5316144 | 8.442604 |
| \mathbf{C} | \mathbf{s} | 2.3728438 | 10.715833 |
| \mathbf{C} | sw | 1.8849110 | 9.710252 |
| \mathbf{C} | sb | 2.7553293 | 9.713793 |

Split table by donor

```
library(knitr)
y<- split(fake, donor)</pre>
```

kable(y\$A)

| donor | stim | ifng | tnfa |
|-------|--------------|-----------|-----------|
| A | un | 2.7072616 | 10.096821 |
| A | w | 1.5414188 | 9.316720 |
| A | p | 2.2535578 | 8.686155 |
| A | \mathbf{S} | 1.9146406 | 10.489663 |
| A | sw | 3.3081768 | 12.578254 |
| A | sb | 0.8981832 | 9.800296 |

kable(y\$B)

| donor | stim | ifng | tnfa |
|-------|-----------------------|-----------|-----------|
| В | un | 0.6948252 | 10.909559 |
| В | w | 1.8245796 | 10.572008 |
| В | p | 3.4785230 | 11.193426 |
| В | \mathbf{S} | 1.4598965 | 9.614351 |
| В | sw | 1.9612774 | 11.115624 |
| В | sb | 1.7067704 | 7.940108 |
| | | | |

kable(y\$C)

| donor | stim | ifng | tnfa |
|-------------------------|-----------------------|-----------|-----------------------|
| $\overline{\mathrm{C}}$ | un | 2.9659728 | 10.179783 |
| \mathbf{C} | w | 0.9600547 | 8.048794 |
| \mathbf{C} | p | 1.5316144 | 8.442604 |
| \mathbf{C} | \mathbf{s} | 2.3728438 | 10.715833 |
| \mathbf{C} | sw | 1.8849110 | 9.710252 |
| \mathbf{C} | sb | 2.7553293 | 9.713793 |

Subtract out unstimulated values

I wrote a function called "subtractun" that pulls the unstim value for each cytokine from each donor and subtracts it from the respective stim values for the respective cytokine. The function uses the 1) split, 2) apply, 3)combine sequence to 1) generate data tables for each individual donor, 2) apply the subtraction of the unstim to the respective cytokines for those donors, and 3) take these newly calculated values for individual donors and combine them into a data table containing all donor values.

```
subtractun<-function (datatable) {
    #Split full data table into smaller data tables for each individual donor
    y<- split(datatable, donor)
    #Subtract out unstim
    newifng<-unlist(lapply(y,function(x)(x$ifng-x$ifng[x$stim=="un"])))
    newtnfa<-unlist(lapply(y,function(x)(x$tnfa-x$tnfa[x$stim=="un"])))
    #Merge donor and stim condition to create new sample ID
    newsampleid<- paste(donor, stim, sep= "_")
    #Create new datatable with unstim substractions applied to all donors</pre>
```

```
datatable <- as.data.table(cbind(newsampleid, newifng, newtnfa))
#Print datatable
datatable
}
newnewfake<-subtractun(fake)
library(knitr)
kable(newnewfake)</pre>
```

Note that the echo = FALSE parameter was added to the code chunk to prevent printing of the R code that generated the plot.
